Cancer Sequencing Guided Personalized and Precision Medicine Platform in Multiple Myeloma

PI: Cesar Rodriguez Valdes
NCT06338150
Document Date: 5/12/2026

Study ID: STUDY-23-00503
GCO: 19-0175
Form Version Date: 18-NOV-2024

STUDY INFORMATION:

Study Title: Cancer Sequencing Guided Personalized and Precision Medicine Platform in Multiple Myeloma

Study site(s): Icahn School of Medicine at Mount Sinai, Mount Sinai Hospital, Mount Sinai Downtown (Chelsea), Mount Sinai Brooklyn

Lead Researcher (Principal Investigator): Cesar Rodriguez Valdes, MD

Physical Address: Icahn School of Medicine at Mount Sinai, 1470 Madison Ave, New York, NY 10029

Mailing Address: Icahn School of Medicine at Mount Sinai, 1470 Madison Ave, New York, NY 10029

Phone: (212) 241-7873

SUMMARY OF THIS RESEARCH STUDY:

This document explains a research study you might be interested in joining. Participation in the study is voluntary. You can agree to join or not. Your decision will not limit your ability to receive care at Mount Sinai. You should only agree to take part if you understand the study and if all of your questions about the research study are answered. If you do join the study, the research team must share any new information with you that may change your mind about taking part.

The purpose of this research study is to analyze the make-up of your biopsy, blood, and/or cheek swab specimens. This type of laboratory analysis is called cancer sequencing. Information gained from the analysis of your specimens may help researchers predict what type(s) of therapy would be most effective in treating your particular type of cancer and may lead to improvements in cancer sequencing-guided treatment recommendations.

If you choose to take part, you will be asked to:

- Participate in the study from the time you sign this consent form to the time you complete the sample collection process.
- Attend the intake session (Approximately 1-2 hours).
- Donate a portion of your biopsy, blood, and/or cheek swab specimens for research analysis. All of these specimens will be collected as part of your routine medical care while you are participating in this study.
- You will not be paid for participating in this research study, and you will not be reimbursed for additional travel or time that may be required for study visits.

If you choose to take part, the main risks to you are the risks of blood and biopsy collection, risks related to learning genetic information, and risks associated with loss of confidentiality.

You may benefit from taking part in this research in the future. This study could provide genetic information that helps identify between high risk vs. standard prognosis based on genetic profiling. The information obtained from this study will help researchers understand the underlying causes of multiple myeloma. Others with multiple myeloma may benefit in the future from what is learned in this study.

You may opt to receive treatment of your disease without taking part in this research study.

If you are interested in learning more about this study, please continue to read below.

STUDY PARTICIPATION:

You may qualify to take part in this research study because you have been diagnosed with relapsed/refractory or progressive multiple myeloma, and you are scheduled to undergo a bone marrow or tumor biopsy, and blood and cheek swab collection, as part of your routine medical care.

Your participation in this research study is expected to last from the time you sign this consent form to the time you complete the sample collection process.

There are 100 people expected to take part in this research study at the Icahn School of Medicine at Mount Sinai, Mount Sinai Hospital, Mount Sinai Downtown (Chelsea), and Mount Sinai Brooklyn.

Funds for conducting this research study are provided by Mount Sinai through a National Institutes of Health (NIH) Research Project Grant (R01) and philanthropic donations.

DESCRIPTION OF WHAT IS INVOLVED:

If you agree to take part in this research study, here is what may be involved:

- Participation in the study is from the time you sign this consent form to the time you complete the sample collection process.
- Intake session (Approximately 1-2 hours). At this visit, someone will review the study with you, and if you agree to participate, you will sign this study consent form. The study investigator will confirm that you are eligible to participate in the study and will review and record your demographic information (name, date of birth, gender, race, medical record number, diagnosis, contact information, and study subject identification number), medical and family history, prior and current medications, and any adverse events you may be experiencing.
- Donation of biopsy, blood, and/or cheek swab specimens for research analysis. All of these specimens will be collected as part of your routine medical care while you are participating in

this study. Extra fluid or tissue may be collected for this study during while you are undergoing your routine clinical care procedures, but you will not have a separate blood or biopsy collection specifically for study purposes. Any leftover specimens that are not used for clinical testing may also be collected for use in this study.

- Up to 1 teaspoon of additional bone marrow aspirate will be collected for use in this study when a bone marrow aspiration is done as part of your routine clinical care.
- If an adequate core biopsy of the bone marrow is obtained for routine clinical purposes while you are participating in this study, a small portion may be separated for use in this study.
- If another type of biopsy is done as part of your routine care, a small portion of the tissue and/or fluid collected may also be separated for use in this study.
- Up to 2 additional tablespoons of blood will be collected for use in this study when blood is collected as part of your routine care. Any blood that would normally be discarded (e.g. excess blood left over after routine clinical processing) will also be considered for use in this study.
- An extra cheek swab sample will be taken for use in this study when a cheek swab is done as part of your routine medical care.

If you have a biopsy or surgery outside of Mount Sinai, we will ask you to complete a release form so that we can get any extra tissue that is still available. Your decision to let us have this extra tissue will not alter your treatment in any manner.

Your research specimens will be stored at a secure location at Mount Sinai, for as long as deemed useful. To protect your privacy and confidentiality, your research specimens and associated data from the study analysis will be de-identified. Your personal health information (PHI) will be removed from your research specimens and associated data, and they will instead be labeled with a unique study-related code. The link to your PHI will be kept in a password-protected database and computer at Mount Sinai. Only authorized study team members will have access to your study specimens, associated data, and link to your PHI.

Genetic Testing

Genetic tests will performed on your specimens, for research purposes, if you agree to participate in this research study by signing this informed consent form.
Your specimens will undergo cancer sequencing, a type of genetic testing. This testing allows for the analysis of your unique deoxyribonucleic acid (DNA), ribonucleic acid (RNA), and related proteins to check for mutations (changes) that carry an increased risk of or predisposition to cancer. DNA contains the instructional “blueprint” used for the development and functioning of all known living cells. RNA uses this “blueprint” to create related proteins. Proteins control biochemical reactions and determine the physical structure of each cell. Study testing will include whole exome DNA sequencing of germline and tumor genomes, RNA sequencing of the tumor transcriptome and single cell, and CyTOF analysis.

These tests will help us to better understand the events associated with the development of your disease as well as their possible reappearance following treatment. Sequencing and analysis will be performed at the Genomics Core Facility at the Icahn School of Medicine at Mount Sinai. In instances where internal sequencing capabilities do not allow for certain types of analysis (e.g., a technology that is not yet available at Mount Sinai), de-identified samples or data may be sent out to third parties for additional analysis. All external genetic tests will be performed in a CLIA certified lab and all tests will be FDA or NYS approved. Interpretation will be performed by a multidisciplinary team that includes genomicists, pathologists, and clinicians familiar with the particular cancer with which you have been diagnosed to study their relevance. . This study is not intended to implement the findings of cancer sequencing, only to report them to the study team once the results are obtained and help us learn on how myeloma behaves. The goal of this analysis and reporting is to:

1. Better our understanding of the underlying processes and pathways involved in multiple myeloma onset and progression
2. Improve the implementation of cancer sequencing-based recommended therapies
3. Improve the accuracy of treatment prediction using machine learning
4. Better interpret cancer sequencing data
5. Advance the development of personalized and precision cancer therapies

The results of this cancer sequencing may reveal the unique genetic features of your cancer. The types of changes in your DNA or RNA revealed may include:

- Changes in DNA/RNA that provide insight into how your cancer developed
- Changes in DNA/RNA that indicate high risk vs. standard prognosis, and potential benefit, or lack of benefit, from specific treatments
- Changes in DNA/RNA that may lead to the development of a new therapy
- Changes in genes that might increase or decrease your risk of developing certain types of cancers
- Changes in genes that suggest relatives may have an increased risk of developing certain types of cancers
- Changes in DNA/RNA that affect how your body uses certain medications or responds to certain treatments
- No clinically significant information

Future Contact:

The researchers may wish to use your personal contact information to contact you in the future. Do you give the researchers permission to **contact you** in the future to request the collection of additional information about you, discuss how your private information, study data and/or samples might be used, or discuss possible participation in another research study?

Please initial your choice: Yes_____ No_____

If "Yes", please indicate your preferred method of contact: (initial all that apply)

[ ] Email [ ] Phone [ ] Letter [ ] Text

USE OF YOUR DATA AND/OR SAMPLES:

The researchers would like your permission to keep your personal information (such as, name, address, date of birth, social security number), study data and/or samples (blood, tissue, urine, saliva, or any other body matter) to use or share in future studies. You can still be part of the study if you do not allow us to use or share them. Please select Yes or No to each of the questions below. To decline all future uses/sharing please select 'No' each time.

(1) Will you allow the researchers to store your data and/or samples to use in future research studies?

Please initial your choice: Yes_____ No_____

If you select No, please stop here and move to the next section, **'Your Responsibilities If You Take Part in This Research**' section below."

If yes, please continue to the next question and tell us how your personal information, study data and/or samples may be used in future research studies.

(2) The researchers can store your data and/or samples in one of two ways:

a) Anonymously (no one will know who the data and/or samples came from). If you choose this option, you can't change your mind. So, if you wanted to have your data and/or samples destroyed in the future, the team could not do it as they would not know which data and/or samples were yours.
b) Linked to your identity (using a code that can show the information came from you personally). In this case you could ask for your data and/or samples to be destroyed in the future if you want that to happen.

How would you like your data and/or samples stored? Please initial **ONE** choice below:

I would like my data and/or samples stored anonymously _____

I would like my data and/or samples stored with a link to my identity through the use of a code_____

(3) Do you give the researchers permission to keep the data and/or samples, so they could use them in future studies that are **directly related** to the purpose of the current study?

Please initial your choice: Yes_____ No_____

(4) Do you give the researchers permission to keep the data and/or samples indefinitely, so they could use them for future studies that are **not related** to the purpose of the current study (for example a different area of research)?

Please initial your choice: Yes_____ No_____

(4.1) From time to time, researchers outside of medicine and related sciences would like to use data and/or samples. This might be in the fields such as anthropology, human origins, mapping human migration patterns. Do you give permission for researchers **outside the field of medicine** to use your data and/or samples?

Please initial your choice: Yes_____ No_____

a. If the future research in a different area can be done without having to know that the data and/or samples came from you personally, that will be done.
b. If the future research in a different area requires that it is known specifically who the data and/or samples came from, then one of the following will be done:
   I. If you allowed the researchers to contact you in the future, they may be able to contact you to explain why your data and/or samples is needed and what will be done with it. Your permission will be asked to use your data and/or samples in that research project.
   II. If you do not give permission to be contacted in the future, or if it is found that contacting you is not practical (for example, because you have moved), your data and/or samples may still be used. The Institutional Review Board (IRB) will be asked for permission to use the data and/or samples linked to your identity. The IRB can give permission for researchers to use and share identifiable health information without contacting you, but only if it determines that sharing the data and/or samples will not be more than minimal risk to you or your privacy. The IRB is a committee of doctors and scientists and nonscientists, including people not associated with this hospital or medical school, whose job it is to protect people who participate in research.

(5) Do you give permission to have your data and/or samples given **to other researchers,** including those at Mount Sinai, other medical or scientific institutions and for-profit companies, for use in research within the limits you have chosen above?

Please initial your choice: Yes_____ No_____

(6) Do you give permission to have portions of your data and/or samples deposited in large public databases (repositories) for use in research with the limits you may have chosen above? Please read the paragraphs below which explains repositories, then initial your choice:

To do more powerful research, it is helpful for researchers to share data and/or samples from the people they study. They do this by putting data and/or samples into a repository. A repository is where something is stored safely for a specified period of time. Data and/or samples from one study may be stored in a repository along with data and/or samples from other studies. Sample repositories are commonly called biobanks, while data repositories are commonly called databases. Researchers can then use the data and/or samples from multiple studies to learn even more about health and disease. If you agree to take part in this study, some of your genetic and health information might be placed into one or more scientific databases, but they will not share your direct identifiers (for example, name, address, date of birth). These databases are maintained by either Icahn School of Medicine at Mount Sinai, another institution, the federal government, or private companies. Any researcher who wants to do a study using data and/or samples from the repository must apply for permission. There are different ways of reviewing such requests. Researchers with an approved study may be able to see and use your data, along with that from many other people. Researchers may use your samples for genetic sequencing and other experimental testing. Researchers will always have a duty to protect your privacy and to keep your information confidential, but there are always risks associated with data and/or sample collection and sharing. They are described in more detail in the Risks section. To withdraw your data and/or samples from the repository, please refer to the instructions in the section below entitled “ending participation in the research study.”

Researchers will use a Global Unique Identifier, a computer-generated ID, which cannot be linked back to your identity. This is so any data collected from you is linked to one unique ID, so the Mount Sinai Cancer Institute Multiple Myeloma Biorepository can make sure your data is secure and is not accidentally duplicated if you take part in research at multiple sites.

Please initial your choice: Yes _____ No _____

Whether or not you have allowed us to share your data and/or samples with the Mount Sinai Cancer Institute Multiple Myeloma Biorepository, the researchers at Mount Sinai will keep data and/or samples collected about you during this research study to use in future research studies consistent with the wishes you expressed above.

YOUR RESPONSIBILITIES IF YOU TAKE PART IN THIS RESEARCH:

If you decide to take part in this research study, you will be responsible for the following things:

- Attending the study visit
- Following the study procedures
- Reporting possible injuries to the research team

COSTS OR PAYMENTS THAT MAY RESULT FROM PARTICIPATION:

You will not be paid for taking part in this study. Being in this study will not cost you anything extra.
Researchers will not pay you for your travel or the time it will take for you to be in the study.
You or your insurance company will be responsible for the costs of all items and services provided which you would have received for your condition if you were not enrolled in this study. You and your insurance company will be responsible for the cost of all services that occur during this research study which the physician believes are medical necessary to treat you. You and your insurance company will not be responsible for the cost of the items and services associated with this research study which are provided to you only for research purposes and not to treat your condition.

POSSIBLE BENEFITS:

There is a chance this study may benefit you in the future, but this is not guaranteed. Others may benefit from what researchers learn from the study. Possible benefits to you include improvement in your disease as a result of the information obtained during this study. For instance, cancer sequencing may reveal a genetic change in your tumor which indicates that your disease is likely to improve with a specific treatment. However, you and other participants may not get any benefit from being in this research study. Others with MM may benefit in the future from what is learned in this study.

POSSIBLE RISKS AND DISCOMFORTS:

If you choose to take part in this study, the main risks to you are the risks of blood and biopsy collection, risks related to learning genetic information, and risks associated with loss of confidentiality, and include:

- The risks of a blood draw include pain, bruising, and the slight possibility of infection at the place where the needle goes in. Some people feel dizzy or may faint during or after a blood draw.
- Risks of biopsy collection include bleeding, infection, and discomfort at the exam site.
    - To minimize any risk, all research blood and tissue collection will occur at the same time as blood and tissue collection done as part of your routine medical care. There will be no additional research blood or tissue collection specifically for research purposes.
- Risk of loss of private information; this risk always exists, but there are procedures in place to minimize the risk. A breach of confidentiality could pose a risk of dignitary harm to you, ranging from social embarrassment and shame, to stigmatization, to possible discrimination, and damage to social and economic status, such as loss of employment and health insurance.
- Group Risks - Although your name will not be given to researchers, basic information such as your race, ethnic group, and sex may be shared. This information helps researchers learn

whether the factors that lead to health problems are the same in different groups of people. It is possible that such findings could one day help people of the same race, ethnic group, or sex as you. However, they could also be used to support harmful stereotypes or discrimination.

- Privacy Risks - Because your genetic information is unique to you, there is a small chance that someone could trace it back to you. The risk of this happening is very small but may grow in the future. Since the database contains genetic information, a break in security may also pose a potential risk to blood relatives as well as yourself. For example, it could be used to make it harder for you (or a relative) to get or keep a job or insurance. If your private information was misused, it is possible you would experience other harms, such as stress, anxiety, stigmatization, or embarrassment from revealing information about your family relationships, ethnic heritage, or health conditions.
- Insurance Risks - There is a Federal law called the Genetic Information Nondiscrimination Act (GINA). This law makes it illegal for health insurance companies, group health plans, and most employers of over 15 people to discriminate against you based on your genetic information. However, it does not protect you against discrimination by companies that sell life insurance, disability insurance, or long-term care insurance.

OTHER OPTIONS TO CONSIDER:

You may decide not to take part in this research study. If you decide not to take part, this will not affect the clinical care you receive at Mount Sinai. The choice is totally up to you.

You may opt to receive treatment of your disease without taking part in this research study.

IN CASE OF INJURY DURING THIS RESEARCH STUDY

If you believe that being in this research study has harmed you, you should contact the Lead Researcher. Their contact information is listed at the beginning of this consent form.

If you are injured or made sick from taking part in this research study, you will get medical care. Generally, it will be billed to you or your insurance. You will be responsible for all treatment costs not covered by your insurance, including deductibles, copayments, and coinsurance. This does not prevent you from seeking payment for injury related to malpractice or negligence. You can contact the Lead Researcher for more information.

ENDING PARTICIPATION IN THE RESEARCH STUDY:

You may stop taking part in this study at any time. No matter what you choose, your care and benefits through Mount Sinai will not be negatively impacted.

If you decide to stop being in the study, please contact the Lead Researcher or the research staff.

You may also withdraw your permission for the researchers to use and share any of your protected information for research, but you must do so in writing to the Lead Researcher at the address on the first page. Even if you withdraw your permission, the Lead Researcher may still use the information that was already collected if that information is necessary to complete the research study. Your health information may still be used or shared after you withdraw your authorization if you have an adverse event (a bad effect) from taking part in the research study.

If you decide you don't want your data and/or samples to be used for research anymore, you can contact the researcher and ask to have your data and/or samples withdrawn or labeled so that they will not to be used in additional projects or shared. If your data and/or samples have already been shared with researchers, those researchers will be asked to stop using them. However, if any data and/or samples have already been shared without your identity or a linking code, it won't be possible to retrieve them. Data and/or samples that have already been used will not be affected by your decision. If your data and/or samples have already been deposited in an external repository, the study team will request that your data and/or samples be removed.

Withdrawal without your consent: The Lead Researcher, the funder or Mount Sinai may stop your involvement in this research study at any time without your consent. This may be because the research study is being stopped, the instructions of the research team have not been followed, the Lead Researcher believes it is in your best interest, or for any other reason. If data and/or samples have been stored as part of the research study, they too can be destroyed without your consent.

CONTACT INFORMATION:

If you have any questions, concerns or complaints at any time about this research, or you think the research has harmed you, please contact the office of the research team and/or the Lead Researcher at phone number (212) 241-7873 or (347) 266-8091.

DISCLOSURE OF FINANCIAL INTERESTS:

Researchers sometimes get paid for consulting or doing work for companies that produce drugs, biologics or medical devices. If you have questions regarding industry relationships, you are encouraged to talk to the Lead Researcher or visit our website at http://icahn.mssm.edu/ where Mount Sinai publicly discloses the industry relationships of our faculty.

MAINTAINING CONFIDENTIALITY – HIPAA AUTHORIZATION:

As part of this study, some of your private and/or protected health information will be obtained, used, and shared with your permission. There is a Federal Health Insurance Portability and Accountability Act (HIPAA) that makes sure this is done correctly and safely.

What is protected health information (PHI)?
PHI is the combination of two things:

1. PHI contains information that identifies you. It will be used to contact you and link you to your health information, like name, date of birth, medical record number, and address.
2. PHI also contains health information, including information about your mental and physical health from your visits to doctors or hospitals, or from study visits.

Every time you visit a hospital or your doctor, PHI is created and recorded in your medical record by your healthcare providers. In the same way, the PHI created as part of this study will be linked to who you are and your medical information.

What PHI is collected and used in this research study, and might also be shared with others?

As part of this study, the research team at the hospital(s) involved in the research will collect your demographic information (name, date of birth, gender, race, medical record number, diagnosis, contact information, and study subject identification number), medical and family history, prior and current medications, and any adverse events you may be experiencing.

During the study, the researchers will gather information by:

- Reviewing and/or taking your medical history (includes current and past medications or therapies, illnesses, conditions or symptoms, family medical history, allergies, etc.)
- Reviewing HIV-related information, which includes any information indicating that you have had an HIV-related test, or have HIV infection, HIV-related illness or AIDS, or any information which could indicate that you have been potentially exposed to HIV.
- Collecting the specimens detailed in the description section of this consent
- Reviewing the genetic tests conducted

Why is your PHI being used?
Researchers need the information that identifies you so they can contact you during the study. They need your health information and the results of any tests and procedures being collected as part of this study to answer the questions posed in the study. The purpose of the study is discussed earlier in this consent form. Before researchers analyze the data, they remove any information that would let others know who you are or that you took part in the study. If researchers publish or present study results at scientific meetings, lectures, or other events, their presentations would not include any information that would let others know who you are, unless you give separate permission to do so.

The Lead Researcher may also use and share the results of these tests and procedures with other healthcare providers at Mount Sinai who are involved in your care or treatment. The research team

and other authorized members of The Mount Sinai Health System ("Mount Sinai") workforce may use and share your information to ensure that the research meets legal, institutional or accreditation requirements. For example:

- The Mount Sinai Program for the Protection of Human Subjects is responsible for overseeing research on human participants and may need to see your information.
- If you receive any payments for taking part in this study, the Mount Sinai Finance Department may need your name, address, social security number, payment amount, and related information for tax reporting purposes.
- I*f the research team uncovers abuse, neglect, or reportable diseases, this information may be disclosed to appropriate authorities.*

Who, outside Mount Sinai, might receive your PHI?

As part of the study, the Lead Researcher, research team and others in the Mount Sinai workforce may disclose your PHI, including the results of the research study tests and procedures, to the following people or organizations: (It is possible that there may be changes to the list during this research study; you may request an up-to-date list at any time by contacting the Lead Researcher.)

- The United States Department of Health and Human Services (DHHS) and the Office of Human Research Protection (OHRP) (the government organization that is responsible for protecting human research participants).
- Other collaborating research center(s) and their associated research/clinical staff who are working with the researchers on this project.
- Research data coordinating office and/or their representative(s) who will be responsible for collecting results and findings from all the centers: Mount Sinai Tisch Cancer Institute Clinical Research Support Unit.
- Outside laboratory that will be performing laboratory analysis for all the research centers involved in this project.
- The sponsoring government agency and/or their representatives who need to confirm the accuracy of the results submitted to the government or the use of government funds: The National Institutes of Health.
- A Data Safety Monitoring Board or other committee that will monitor the study on an ongoing basis for safety.

In almost all disclosures outside of Mount Sinai, you will not be identified by name, social security number, address, telephone number, or any other direct personal identifier, unless disclosure of the direct identifier is required by law. Some records and information disclosed may be identified with a unique code number. The Lead Researcher will ensure that the key to the code will be kept in a locked file, or will be securely stored electronically. The code will not be used to link the information back to you without your permission, unless the law requires it, or rarely if the Institutional Review Board (IRB) allows it after determining that there would be minimal risk to your privacy. It is possible that a sponsor or their representatives, a data coordinating office, a contract research organization, may come to inspect your records. Even if those records are identifiable when inspected, the information leaving the institution will be stripped of direct identifiers. Additionally, when applicable, the monitors, auditors, the IRB, *OHRP, as well as the Food and Drug Administration (FDA) will be granted direct access to your*

medical records for verification of the research procedures and data. OHRP and FDA are authorized to remove information with identifiers if necessary to complete their task. By signing this document you are authorizing this access. The results of this research may be published. However, your name and other identifying information will be kept confidential.

For how long will Mount Sinai be able to use or disclose your PHI?
Your authorization for use of your PHI for this specific study does not expire.

Will you be able to access your records?
During your participation in this study, you will have access to your medical record and any study information that is part of that record. The research team is not required to release research information to you that is not part of your medical record.

Do you need to give the researchers permission to obtain, use or share your PHI?
NO! If you decide not to let the research team obtain, use or share your PHI, you should not sign this form, and you will not be allowed to volunteer in the research study. If you do not sign, it will not affect your treatment, payment, or enrollment in any health plans or affect your eligibility for benefits.

Can you change your mind?
If you decide to stop being in the study, please contact the Lead Researcher or the research staff.
The research team may ask you whether they can continue to collect information from your medical record. You will also have to decide if you wish to limit the continued use of the information collected during the study. Under US privacy laws you may also withdraw your permission for the researchers to use and share any of your protected information for research, but you must do so in writing to the Lead Researcher at the address on the first page.

Even if you withdraw your permission, the Lead Researcher may still use the information that was already collected, but only to complete this research study. Your health information may still be used or shared after you withdraw your authorization if you have an adverse event (a bad effect) from taking part in the research study.

If you have not already received it, you will also be given The Hospital's Notice of Privacy Practices that contains more information about how The Hospital uses and discloses your PHI.

It is important for you to understand that once information is disclosed to others outside Mount Sinai, the information may be re-disclosed and will no longer be covered by the federal privacy protection regulations. However, where possible, Mount Sinai has entered into agreements with those who will receive your information to continue to protect your confidentiality.

If researchers are reviewing your medical records or asking questions about your medical history or conditions, it is possible that they may learn information related to your HIV status. If that is the case, the following information concerns you. If researchers are not reviewing your medical records or asking questions about your medical history or conditions, then you may ignore the following section.

Notice Concerning HIV-Related Information

If you are authorizing the release of HIV-related information, you should be aware that the recipient(s) is (are) prohibited from re-disclosing any HIV-related information without your authorization unless permitted to do so under federal or state law. You also have a right to request a list of people who may receive or use your HIV-related information without authorization. If you experience discrimination because of the release or disclosure of HIV-related information, you may contact the New York State Division of Human Rights at (888) 392-3644 or the New York City Commission on Human Rights at (212) 306-5070. These agencies are responsible for protecting your rights.

How the Institutional Review Board (IRB) can help you:

This research has been reviewed and approved by an Institutional Review Board (IRB). You may reach a representative of the Mount Sinai Program for Protection of Human Subjects at telephone number (212) 824-8200 during regular work hours (Monday-Friday, 9am-5pm, excluding holidays) for any of the reasons listed below. This office will direct your call to the right person within the Mount Sinai Health System:

- Your questions, concerns, or complaints are not being answered by the research team.
- You cannot reach the research team.
- You are not comfortable talking to the research team.
- You have questions about your rights as a research participant.
- You want to get information or provide input about this research.

Study ID: STUDY-23-00503
GCO: 19-0175
Form Version Date: 18-NOV-2024

ADULT PARTICIPANT:

Your signature below documents your permission to take part in this research study and to the use and disclosure of your protected health information. A signed and dated copy will be given to you.

Signature of Participant	Printed Name of Participant	Date	Time
